

# SURFACE MOUNT INSTRUCTIONS

Minimalistic Design | Changing the way we see home

## Installing Surface Mount Box

Nail or screw the Flush Mount box to stud and adjust to desired depth.

Make sure it is level.

Install the wires into the back of the box with the self-clamping wire flange.

## Install Stone/Wood panel and Trim Ring

Install granite/wood or stone. The box has adjustments for depth to compensate for whatever material thickness you need. Adjust the box bringing the front of the box flush with the hard surface. Snap the White Surface Mount Ring into place on the surface of the granite/wood or stone. \*\*The white ring must sit flat against the surface with no humps or debris underneath. If the ring does not sit flat, it will not finish correctly.

## OUTLET: Install the Tamper Resistant Outlet and Faux Paint

Drop the tamper resistant outlet provided with the kit into place and install, as a normal process.

It is best to test the outlet before installing the fascia.

Snap the fascia into place, over the outlet. Faux color the fascia to match the surface.

## LIGHT SWITCH: Install light switch or dimmer

When installing a light switch or dimmer, tabs may need to be removed to adjust for the thickness of the product being installed.

Some switches and dimmers may need to be modified. You may need to trim the metal tabs on the ends of the switch for proper fit.

Best practice is that that you test the light switch before snapping the fascia in place

### Single gang kits available

Single Gang Flush Mount Outlet Kit  
Single Gang Flush Mount Light Switch Kit  
Single Gang Flush Mount Face Plate Keystone Kit  
Single Gang Flush Mount Blank Face Plate

Single Gang Surface Mount Outlet Kit
